

Task 3

Summary

FairLink is a U.S.-Hong Kong cross-jurisdictional fair lending compliance tool specifically designed for The Bank of East Asia (Hong Kong). It fundamentally addresses the pain point of multinational banks needing to simultaneously satisfy the U.S.'s strict anti-discrimination rules and Hong Kong's outcome-oriented regulatory requirements (Consumer Financial Protection Bureau, 2023; Hong Kong Monetary Authority, 2025). The tool has two sets of differentiated regulatory rules (U.S. and Hong Kong) built in, enabling one-click switching. It automatically calculates the approval rate difference between gender groups and accurately identifies hidden algorithmic biases. Based on the requirements of different jurisdictions, it automatically generates corresponding compliance determination results and denial explanation reports: detailed technical explanations for the U.S. jurisdiction, and only brief explanations for Hong Kong (CFPB, 2023; HKMA, n.d.). The tool is built on Hong Kong local credit data, features a lightweight design that requires no modification to existing systems, and can be run directly to validate core logic, balancing compliance authenticity and practicality. FairLink does not replace human approval, does not store raw privacy data, and does not yet cover all protected characteristics (Office of the Comptroller of the Currency, 2026). However, it efficiently achieves automated cross-jurisdictional fairness detection, significantly reduces compliance audit costs, minimizes algorithmic discrimination risks, avoids regulatory penalties, and helps BEA rapidly respond to U.S.-Hong Kong regulatory differences, enabling fair, compliant, and efficient digital credit management.
